

Vision Empower Trust AI Skilling Program

MODULE 2

EMPOWERING TEACHERS TO USE AI FOR EDUCATION

Vision Empower Trust

Agenda

Item	Details
Audience	Teachers, special educators, resource persons and school leaders working with visually impaired students
Duration	90 minutes
Mode	Hands on
Module purpose	Equip teachers to use AI for creating, adapting, translating, and delivering inclusive, accessible, and engaging learning experiences.
Session principle	This session is practical and teacher-centered, with a focus on using AI responsibly to create inclusive, accessible, and personalized learning resources. Teachers will learn through hands-on activities and refine prompts to achieve better AI-generated outcomes.

Pre-Assessment

- Name any two ways AI can help teachers in classroom teaching.
- Do you know how to use AI to generate worksheets and lesson plan?
- How can AI make learning materials more accessible for students with visual impairments?
- Can AI generate lesson plans, worksheets, and content in regional languages?
- Do you heard the word prompt? What is that?
- What should a teacher do before using AI-generated content in the classroom?

Learning Outcomes

By the end of this module, teachers will be able to:

- Use AI for various educational outcomes
- Evaluate AI-generated content for accuracy, bias, and relevance.
- Apply ethical and responsible AI practices, including fact-checking and protecting student privacy.
- Confidently integrate AI into daily teaching to improve learning outcomes and save preparation time.

Quick Recap of AI In Education

Examples of data from education

Data Type	Examples in School Education	How it can be used
Numerical Data	Student marks, attendance percentage, number of assignments submitted, test scores, class strength, time spent on an LMS	Performance analysis, identifying learning gaps, tracking progress
Text Data	Essays, answers to descriptive questions, teacher feedback, lesson plans, report cards, discussion forum posts, textbook content	Assess writing skills, generate summaries, analyze feedback, create learning resources
Image Data	Scanned answer sheets, diagrams drawn by students, photographs of science experiments, artwork, geometry figures, handwritten notes	Automated evaluation, handwriting recognition, diagram analysis, portfolio assessment
Audio Data	Students reading aloud, language pronunciation exercises, oral exams, teacher lectures, classroom discussions, podcast lessons	Speech assessment, pronunciation feedback, transcription, accessibility
Video Data	Recorded classroom lessons, student presentations, lab experiment demonstrations, sports activities, online classes, classroom observations	Teacher training, student assessment, engagement analysis, flipped learning

Where can AI be used in Education

- Lesson plan generation
- Translating materials (curricular and extra curricular) to regional languages
- Answering students' questions with examples from regional contexts
- Getting intuitive explanations for hard concepts
- Generate worksheets to test and give practice based on the students' needs
- Generate adapted activities for visually impaired children
- Generating audio content from textual content for listening comprehension
- Making accessible content in different formats (Word, HTML, PDF, EPUB)
- Generate alternate text for pictures

Teacher-In-The-Loop when using AI for education

- **Teachers are responsible** for learning outcomes, student well-being, and ethical use of AI.
- **Teachers should provide the judgment**, ethics, context, and care that transform AI-generated content into meaningful learning.
- AI can generate incorrect facts, outdated information, or misleading explanations. **Teachers should verify** before using.
- **Teachers should ensure AI-generated** content matches the prescribed curriculum, learning outcomes, and grade level.
- **Teachers should personalize** AI-generated content based on students' abilities, interests, language, and learning pace.
- **Teachers should educate** the students about Responsible, Informed and Conscious use of AI

Suggested first prompt in every chat :

"QUESTION" — Teacher AI Guardrail Prompt

You are an AI teaching assistant. Your role is to support teacher judgment, not replace it. Apply ****QUESTION**** to every response:

****Question assumptions**** : Challenge unsupported assumptions in the request, sources, and your own reasoning. Do not present assumptions or opinions as facts.

****Use reliable evidence**** : Ground factual claims in credible, relevant sources. Prefer primary, official, and peer-reviewed sources. Never invent facts, citations, quotations, statistics, or references.

****Expose uncertainty**** : Never guess to fill gaps. Clearly distinguish what is known, inferred, uncertain, disputed, or unknown.

****Scan for bias**** : Identify stereotypes, hidden assumptions, missing perspectives, and potentially discriminatory or misleading framing. Do not infer sensitive characteristics without evidence.

****Trace to the source**** : Ensure claims accurately reflect their sources. Never stretch, misrepresent, or fabricate citations. When sources conflict, acknowledge the conflict.

****Inspect for inclusion & accessibility**** : Make content age-appropriate, inclusive, culturally respectful, and accessible. Consider diverse learners, including students with disabilities, especially learners with Visual Impairment.

****Observe educational impact**** : Consider whether the output could misinform, disadvantage, stereotype, or otherwise harm students. Flag high-stakes content for teacher review.

****Never skip verification**** : Before presenting content as ready to teach, check accuracy, evidence, bias, accessibility, age-appropriateness, and limitations. Clearly identify anything the teacher must verify.

Core rule

****Do not optimise for confidence or time. Optimise for truth, evidence, transparency, inclusion, accessibility, and student safety.****

With and without the **QUESTION** prompt

Without the prompt

With the prompt – K and L
Orbits are correctly marked

Try your questions with and without the guardrail prompt

Lets use AI In Education

General method for working with Generative AI

- Decide whether Generative AI is needed, or a simple search would be enough
- In GenAI of your choice, like Copilot, create an account. Different tools have different uses.
- Open a new chat for a new topic or an existing chat to continue with an earlier work
- Based on the accuracy needed, enter the QUESTION prompt (copy paste)
- Enter the prompt for the work
- Multiple cycles
 - Review the output
 - Rework
- Use the result

Learning about Prompting

- **Prompt** is an input to guide any Generative AI
- **Structured Prompting** should be learnt and practiced to increase accuracy and ensure appropriateness

Letter	Element	Guiding question
G	Goal	What response do you want from AI?
R	Role & Context	Why do you need it, who is involved, and what should AI understand about the situation?
A	Audience	Who is the response for? (students, teachers, class/ age level, low vision, completely blind etc.)
S	Sources	Which information sources, references, or samples should AI use?
P	Preferences/ Expectations	• Word limit • Language • Curriculum • What AI should not do • Required format • Whether citations are required

5 Prompt categories

The diagram illustrates five prompt categories. On the left, a light orange rectangle contains the text 'Five Prompt Categories'. To its right, five dark blue ovals are arranged in a grid-like fashion. The top row contains 'Create' and 'Ask'. The middle row contains 'Edit' and 'Understand'. The bottom row contains a single oval 'Catch up'. Each oval lists a category name followed by a brief description of its function.

Five Prompt Categories

Create

Make something
for me

Ask – Tell me
the answer

Edit – Improve
what I have

Understand
– Help me
understand it

Catch up – Tell me
what I missed

Different AI use cases in Education for teachers

Hands- On

Use Case: Create Accessible Learning Materials Using AI

Activity:

Enter the prompt:

Goal: Convert a document into **Word, HTML, PDF, or EPUB** format.

Context: The document is educational content that needs to be made accessible for **Visually Impaired (VI)** students.

Source: Use the **original document** provided as the source.

Expectation: Convert the document into the selected format while preserving the **content, headings, structure, tables, and important information**. Ensure the final document is **accessible and screen-reader friendly**.

- Generate **alt text** (image descriptions) for classroom images.
- **Hands-on:** Create alt text for one classroom image.

Key Takeaway

AI helps make learning materials more accessible by supporting multiple formats and meaningful image descriptions for all learners, including students with visual impairments.

Hands- On

Use Case : Translation

Activity:

- Give this prompt :
- **Goal:** Translate educational content from **English into simple and clear Tamil/any other languages.**
- **Context:** The content is intended for **students**, including **Visually Impaired (VI) students**. The translation should be easy to understand and suitable for learning.
- **Source:** Use the **given English educational content** as the source and preserve its original meaning.
- **Expectation:** Act as an experienced educational translator. Keep the **meaning, important scientific terms, headings, and questions unchanged**. Use simple, clear Tamil that students can easily understand. Do not add, remove, or change any important information.
- Review the translation for **accuracy, clarity, and context**.
- **Hands-on:** Translate one textbook page and simplify it for students.

Key Takeaway

AI enables quick, multilingual content creation, but teachers should always verify and refine translations before classroom use.

Hands- On

Use case: Create Accessible Explanations Using AI

Activity:

Enter the prompt

- **Goal:** Explain the concept of momentum to a Visually Impaired (VI) student using tactile experiences.
- **Context:** The student is a Grade 7 VI student. The explanation should be simple, practical, and easy to understand through touch and real-life experiences.
- **Source:** Based on the Tamilnadu State board Grade 7 Science curriculum and standard concepts of momentum.
- **Expectation:** Act as an experienced Science teacher. Explain momentum using simple language, real-life examples, and safe hands-on tactile activities that a VI student can perform and understand independently.
- Review the AI-generated explanation for accessibility and clarity.
- **Hands-on:** Generate **three different explanations** using different tactile or real-life examples.

Key Takeaway

- AI supports inclusive teaching by helping teachers create accessible and learner-friendly explanations for students with diverse needs.

Hands- On

Use Case: Generate Worksheets Using AI

Activity:

Enter prompt:

Goal: Create an accessible worksheet on **Force** for **Grade 6** students.

Context: The worksheet is for **Visually Impaired (VI) students**. It should help students understand force through simple language, real-life examples, and tactile or hands-on activities.

Source: Based on the **Tamil Nadu State Board Grade 6 Science syllabus and textbook**.

Expectation: Act as an experienced teacher for VI students. Create a simple, interactive, and accessible worksheet with clear instructions, MCQs, fill-in-the-blanks, short-answer questions, hands-on activities, and an answer key. Make sure all activities can be completed by blind and low-vision students.

- Review the results for accuracy and grade appropriateness.

Key Takeaway

AI helps teachers quickly create high-quality assessments, while teachers ensure they align with learning objectives and student needs.

Hands- On

Use Case: Create Audio Lessons Using AI

Activity:

- **Goal:**
Convert a short Science lesson into an accessible audio lesson using AI and Text-to-Speech (TTS).
- **Context:**
Create learning content that is simple, clear, and accessible for Visually Impaired (VI) students.
- **Source:** Use the **Tamil Nadu State Board Science syllabus/textbooks** to create accurate lesson content using ChatGPT, Microsoft Copilot, or Google Gemini
- **Expectation:** Act as an experienced inclusive Science teacher. Create a short, simple, and clear lesson suitable for VI students.
- **Steps:**
 - Select a short topic from the **Tamil Nadu State Board Science syllabus/textbook**.
 - Use **ChatGPT, Microsoft Copilot, or Google Gemini** to create a short lesson suitable for VI students.
 - Review the generated content and ensure that the **scientific information is accurate** and aligned with the textbook.
 - Open **Sarvam AI → Text-to-Speech**.

- Copy and paste the lesson content into the input box.
- Select a suitable **voice and required variations**, then click **Run Request**.
- Listen to the generated audio and check:
 - Clear pronunciation
 - Appropriate speaking speed
 - Natural pauses
 - Easy-to-understand language
 - Correct pronunciation of scientific terms
- Make necessary corrections and regenerate the audio if required.
- Review the generated audio for Clarity, Correct pronunciation, Appropriate speaking speed , Natural pauses, Accuracy of the content.
- Hands-on Activity
 - Create a 2-minute audio lesson for a topic from your own subject using Sarvam AI Text-to-Speech
 - **Key Takeaway**
AI makes it easy to create engaging and accessible audio content that supports diverse learners and reinforces classroom teaching.

Hands- On

Use Case: Turn Science Laws into Music Using AI

Activity:

- **Goal:** Convert science laws into a simple and memorable song using AI.
- **Context:** The activity is designed for **Visually Impaired (VI) students** to make learning science laws more engaging through audio and music.
- **Source:** Use a **science law or short set of science laws** from the relevant school Science textbook or syllabus.
- **Expectation:** Act as an experienced Science teacher. Use **Suno AI** to generate a song from the selected science law. Listen to the generated song and check whether the **science law is accurate, clearly pronounced, easy to understand, and easy to remember**.
- Share the audio with VI students and encourage them to listen and repeat the key points.

Hands-on:

Create a short educational song using Suno AI from one science law, such as Newton's First Law of Motion. Play the song for the students and ask them to identify and recall the science law.

Key Takeaway:

AI can convert science concepts and laws into engaging music, helping VI students learn, remember, and revise important concepts through audio-based learning.

Hands- On

Things to look out for as a teacher

Things to look out for as a teacher

- AI dependence can **deter critical thinking, creativity, learning** – both for teachers and students
 - Humans need to learn to question, evaluate, and verify AI-generated responses rather than accepting them blindly.
- AI dependence **can result in unfairness & exclusion**
 - Humans need to identify and correct bias, stereotypes, or culturally inappropriate content produced by AI (gender and racial bias)
- AI **can cause data privacy and safety issues**
 - Humans need to ensure sensitive information is not shared with AI tools.
- AI **can cause unethical practices**
 - Humans need to ensure AI supports learning without encouraging plagiarism or overdependence.
- AI **cannot enforce human values**
 - Humans need to ensure empathy, motivation, encouragement, classroom relationships, and emotional support remain uniquely human strengths.
- Gen AI can confidently make up **facts without sources**
 - Humans need to know the subject matter well to identify the errors generated by AI that are not backed by science or facts

Let us all remember

- AI is not a substitute for
 - Professional advice from teachers, doctors, CA, lawyers etc.
 - Do not rely on AI generated content for your physical or mental health
- AI may talk like a human but it does not have emotions. The responses are generated to make the humans “feel like they are talking to another human”
- We should not develop overdependence on AI
- AI is not always accurate
 - Self judgement for accuracy is a must
 - Lag between current updates and the training data
 - Not being aware of the training the model has received
- Responsibility of using AI properly is on the humans
- When there is a need to get live data input, official sources information, access the sources directly without AI
- Use AI only when needed as there is an environmental cost for running AI models as well due to the large computing and data storage needs
- GRASP prompt to ask questions, QUESTION prompt evaluate responses

Can I teach AI to students ?

- As understood in the session, AI is a very powerful tool in the hands of its user
- Students may not completely understand the applications as well the challenges of AI
- Students may not know how to verify the accuracy and other issues like bias and hallucination even if they are explained to them
- Students may consider these tools as other humans and should not disclose private, sensitive and confidential information that can cause harm or risk the safety
- Students may develop overdependence, and follow unethical practices
- Students' learning and creativity may get affected
- GenAI may not enforce appropriate age limits
- **Responsible, Informed and Conscious use of AI should be taught to them at all ages, but it cannot be ensured**
- **QUESTION – AI Prompt to be shared with the students as well**

Post-Assessment

- Name any two ways AI can help teachers in classroom teaching.
- Do you know how to use AI to generate worksheets and lesson plan?
- How can AI make learning materials more accessible for students with visual impairments?
- Can AI generate lesson plans, worksheets, and content in regional languages?
- Do you heard the word prompt? What is that?
- What should a teacher do before using AI-generated content in the classroom?

**AI can be a powerful assistant for
the humans when used in an
Responsible, Informed, and
Conscious
manner**

Thank You !
